Infections associated with varicella-zoster virus in Norway: disease burden and healthcare resource utilization

1. **Page 17**, correction of the definition of breakthrough varicella, the corrected sentence is:

Breakthrough varicella, caused by a wild-type VZV, **occurs after more than** 42 days (two incubation periods of varicella) following vaccination with at least one dose of any varicella vaccine, and without other apparent cause [93].
